P 14. $D = \left\{ \begin{pmatrix} z & 0 \\ 0 & z^{-1} \end{pmatrix}, z = e^{i\theta} \right\} \cong U(1)$

(a) $d \in D$ $u = \begin{pmatrix} \alpha & \beta \\ -\bar{\beta} & \bar{\alpha} \end{pmatrix} \in SU(2)$ $|\alpha|^2 + |\beta|^2 = 1$

$u \, d \, u^{-1} = \begin{pmatrix} \alpha & \beta \\ -\bar{\beta} & \bar{\alpha} \end{pmatrix} \begin{pmatrix} z & 0 \\ 0 & \bar{z} \end{pmatrix} \begin{pmatrix} \bar{\alpha} & -\beta \\ \bar{\beta} & \alpha \end{pmatrix}$

$= \begin{pmatrix} |\alpha|^2 z + |\beta|^2 \bar{z} & \alpha\beta(-z+\bar{z}) \\ \bar{\alpha}\bar{\beta}(-z+\bar{z}) & |\alpha|^2 \bar{z} + |\beta|^2 z \end{pmatrix} \in D$

$\Rightarrow \alpha = 0$ or $\beta = 0$

$N_{SU(2)}(D) = \left\{ \begin{pmatrix} z & 0 \\ 0 & \bar{z} \end{pmatrix}, z \in U(1) \right\} \cup \left\{ \begin{pmatrix} 0 & -\bar{z} \\ z & 0 \end{pmatrix}, z \in U(1) \right\}$

$= D \cup \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} D$

(b) $N_{SU(2)}(D) / D = \left\{ \begin{pmatrix} z & 0 \\ 0 & \bar{z} \end{pmatrix} D = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} D, \right.$

$\left. \begin{pmatrix} 0 & -\bar{z} \\ z & 0 \end{pmatrix} D = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} D \right\} \cong \mathbb{Z}_2$

(c) $\begin{pmatrix} \alpha & 0 \\ 0 & \bar{\alpha} \end{pmatrix} \begin{pmatrix} z & 0 \\ 0 & \bar{z} \end{pmatrix} \begin{pmatrix} \bar{\alpha} & 0 \\ 0 & \alpha \end{pmatrix} = \begin{pmatrix} z & 0 \\ 0 & \bar{z} \end{pmatrix}$

$\begin{pmatrix} 0 & -\bar{\alpha} \\ \alpha & 0 \end{pmatrix} \begin{pmatrix} z & 0 \\ 0 & \bar{z} \end{pmatrix} \begin{pmatrix} 0 & \bar{\alpha} \\ -\alpha & 0 \end{pmatrix} = \begin{pmatrix} \bar{z} & 0 \\ 0 & z \end{pmatrix}$

(d) should at least contain $\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$. and some

$a = \begin{pmatrix} 0 & z \\ -\bar{z} & 0 \end{pmatrix}$. then it contains $a^2 = \begin{pmatrix} -1 & 0 \\ 0 & -1 \end{pmatrix}$

& $a^3 = \begin{pmatrix} 0 & -z \\ \frac{1}{z} & 0 \end{pmatrix}$. it's not isomorphic to $\mathbb{Z}_2$.

($N_{SU(2)}(D)/D$ is not a subgroup of $SU(2)$

or $N_{SU(2)}(D)$)

P15.

G-set X. $\phi : G \longrightarrow S_X$

(a) effective $\iff$ ϕ injective, i.e. $\phi(g) = 1$ iff $g = 1$

$\forall g \neq 1$. $\exists x$ s.t. $g x_1 = x_2 \neq x_1 \iff \forall g \neq 1$. $\phi(g)$ is a nontrivial permutation $\phi(g) \neq 1$

(b) $\{g_i\}$ are ineffective $\forall g \in G$

$g_i g x = g_i \cdot x' = x'$ $(\forall x \in X)$
$g g_i x = g x = x'$

$\Rightarrow g_i g = g g_i$ $\forall g \in G$

trivial to show $\{g_i\}$ is a group

$\Rightarrow H = \{g_i : g_i x = x \; \forall x \in X\} \triangleleft G$

(c) define the action $G/H \times X \longrightarrow X$

$(gH) \cdot x := g x$

$\forall x \in X$, s.t $(gH) x = x \iff g x = x \iff g \in H \iff gH = H = 1_{G/H}$

P16. X a finite G set.

G - action transitive $\Rightarrow$ one orbit $= X$

Burnside's lemma $\Rightarrow$ $|G| = \sum\limits_{g \in G} |X^g|$

If all g's have fixed points. $\sum\limits_{g \in G} |X^g| \geq \sum\limits_{g \in G} 1 = |G|$

equality holds iff $\forall g. \; |X^g| = 1$

But $|X^e| = |X| > 1$

$\Rightarrow |X^g| = 0$ for some g.
